

**ENTERPRISE
SECURITY
SOLUTIONS**

**INFORMATION TECHNOLOGY
SECURITY SERVICES**

Enterprise Security Solutions is a professional services organization which stresses personalized treatment and professional results. Our consultants have an average of 25 years in the IT field and hold CISSP certifications and Top Secret clearance. Unlike other consulting firms, the people who arrange and coordinate our services with you are the same people who perform the work. We offer security **solutions**, *not just another system or piece of hardware or software thrown on your network.*

We follow ISO 17799 practices and can help your organization's security culture by working **with** your IT department to achieve **GLBA** or **HIPAA** compliance and self-sufficiency.

We are experienced in Windows/Active Directory, Novell, AS/400, and most flavors of Unix. We can help you secure your firewalls and routers, reduce e-mail SPAM, implement intrusion detection, secure VPN and remote dial access, design disaster recovery solutions, and much more.

We keep our administrative overhead low and pass these savings on to our clients.

Typical pricing for our most requested services:

Internal security assessment:	\$10K
Internet penetration testing:	\$ 5K
Security tools deployment:	\$10K
Policy development:	\$10K
Hourly rates:	\$125/hr.

For those companies with limited budgets, we offer a collection of freeware and low-cost quality tools and can help you implement these at your site to help you secure and monitor your network.

We can provide assistance on an hourly rate, per assessment basis, or can provide full security services on a trusted security advisor basis. Call us toll free at (866) 563-6362 or e-mail us at Info@EnterpriseSecuritySolutions.net to discuss your security needs.

Sincerely,

Michael Esposito
